

AN  
EPHEMERIS  
FOR

*The Year 1656*

Being Bissextile or Leap Year.

Rationally predicting the most  
remarkable Affairs probable to  
happen this present Year.

With Monethly Observa-  
tions, and Astrological Judg-  
ments, upon what Luseales are  
also conjectured to reign; with Di-  
rections to young Students for  
to cure the same.

Left perfect in the Study of

NICH. CULPEPER, Gentleman

Student in Astrology and Physick  
lately Deceased: and now publish-  
ed by his worthy Friend,

D<sup>r</sup> THO. HARRINGTON,  
*apothecary*

*A Discourse of Saturn and Jupiter:*

**R**ationally to deduce an *Astrological* Predictive judgement, from the *Celestial* configurations and Heavenly *Phænomena's*, requireth a sound judgement, and much experience thereby contracted; either of our own knowledg, or from the experience of antient and modern Authors, who were Masters in this *Science*; which to do as near as God shall enable, I will take a Consideration of such predominating *Celestial Influences*, as are at or near these times concomitant and agreeable with Terrestrial *Agitations*, as the posture of the Times now stand; for a list whereof take these,

1. The Conjunctions of *Saturn* and *Jupiter*, 1623 and 1643.
2. The Comet in 1652.
3. The Luration preceding.
4. The Eclipse of the Sun, 1654 Aug. 2.
5. An Eclipse of the Moon, Jan. 1. of this present year.
6. An Eclipse of the Sun, the sixteenth of the same Month.
7. The *Angles* of the Planets with their *Nodes*.
8. A Conjunction of *Saturn* and *Mars* the Ascendent whereof is the place of the Comet 1652, the fourth of Decemb.
9. The *Directions* which approach these times.
10. Some of the *Profections* of the most principal.

6 *A Discourse of Saturn and Jupiter.*

And Lastly, not forgetting (though not hitherto publickly remembred by any I know of) the relation which succeeding configurations have to the preceding, for judgment of the present time; which to prove considerable: I shall rationally argue, from the consideration of Conjunction of Saturn and Jupiters *Transmigration* from the fiery to the watry Triplicity. The *Marchy*, Power and *Greatness* is well known to have received a stop, upon this Coalition of the Superiors in the watry Triplicity: nor can it be expected, that *Marchy* should ever have swelled beyond the bounds which it hath formerly seen in the world, had not this unwonted, and more then ordinary breach of the custome of *Nature* befallen.

How *Greatness* hath declined we all know, *Ergo*, according to the Maxims of the best Masters of this Science; nay, more, the general received opinions of knowing spirits: that till such time as any Coelestial configuration hath received a period of his operation from the force of a contrary virtue, the force prescribed according to Nature, remains impreachable. And what Configuration is it according to Nature, that computes Period to this watry *Transmigration* from the fiery; but such a fiery Transmigration, from the Aquatic Trigone, once more contrary to Custom, into the fiery Trigon? For what *Celestial* position can this be, which can contradict this, they themselves being the most excellent and chief amongst *Celestial*?

I will not say but that succinctly the Superiors move into the fiery Trigon: some years ensuing, together with some Configurations, may give a power of com-

commanding greatness unto some over their fellow brethren; but that Monarchy, nay more, a fifth *Monarchy*, so strongly maintained by some, shall ever appear in the world, in that *lustre* by some expected, I from hence deny; and shall esteem all such *predictions* as vain *Fantasies*, and not deduced from principles of art, until such a return be as I formerly *mentioned*: which, whether it ever will or nor, it is not my leisure to calculate, nor stands out with expedience to determine.

Nay how the *Comet* in 1652, should advance a particular greatness, cannot by principles of Art be determined, all things duly considered. That it was a new and strange *light*, tis certain, if I may call it a light, and that it's first rising was from *Cancer*, the House of the Moon, signifying rather the Multitudes approaching by a *Retrograde* motion, as it self had, to dethrone such as are typified, sitting in the Royal Chair of *Cassiopea*: but this I leave to the judgment of judicious *Artists* to censure at present, and to time to determine in future, and shall now approach to a *general* judgment of this present Year of grace, 1656.

*General Astrological Predictions, 1656.*

I did ever expect this Year would be a great Year, and have great hopes and good grounds for my so hoping; that what has been so long promised, both in Heaven and Earth, will this year be performed, or in *posse*: nay certainly if any good or amiable, friendly, and *Salubrious* blessing hath been promised by

## General Astrological Predictions

From great Conjunctions, to make us once possessors of our selves: I have great reason to think that it shall be in this Revolution, or not deferred long after, and that we may with judgment consider: I shall here according to customs erect the Scheme of the worlds Revolution.

The Ascendant sign of this yearly Revolution, viz. *Libra*, is opposite to the sign of the pre-  
cedent return of *Saturn* and *Mars* last Conjunction in the Lu-

nation pre-  
cedent of this Ingress, we have the Moon deflux-  
ing from a Conjunction of *Saturn*, Lord of the A-  
scendant of this Luration, and of the place of the  
Moon in the Revolution, and next applying to the  
Opposition of *Mercury*, which in the Revolution is  
posited in the sign of the seventh.

The Ascendant of this Revolution is opposite to  
the Ascendant of our Nation.

In this present Ingress; the *Moon* defluxeth from  
the Trines of *Saturn* and *Mars*, and applies to the  
Sexile of the *Sun*: from all which I infer that those  
bene-

*General Astrological Predictions.*

*beneficial* Laws, these gracious Acts and Ordinances and these gentle agitations, which for the Nation are by many upright men of sound judgment and integrity, much thirsted after, will find many difficulties, many *overtures*, strong debates, violent conflicts, heady and giddy disputes, and to conclude, as large *Mercurial*, brawlings against their establishment, as ever any thing (that was lawful and just, and a Nations true Rights had.

Most desperate backbitings, egregious slanders, bestowed upon our Superiour, which the Dragons tail in *Cancer* confirms, the Lady whereof is in Opposition to her own Sign, and Cusp of the tenth in the *Scheam*; which imports thus much: a vexatious spirit, and almost distracted fancy, and to conclude so near the gate of despair, will our *Grandees* be in some times of this *Revolution*, that did not a higher power of the *Celestials* defend them, they would even droop under their Massie burthen; but we have here the *Sun* entering *Aries*, and *Radically* the strongest in the *Scheam*, it being the Ascendant of our English Nation: we at length after many debates, and the controversies and struglings before mentioned shall overcome, as to us English: but let other Nations look to themselves.

The *Lunation postventional* look more cheerfully upon us, the Horoscoping Sign thereof beholding our English ascend by an Amicable Trine.

Nature hath also so wonderfully disposed the matter, that the *Dragons Head of Jupiter*, is in the sign of the tenth House of the *Revolution*: so that from hence we do not onely hope that our *Magistrates* will  
act

act nothing ignobly, nor regard the bitter reproaches of many; but that they will also have an exceeding great and honourable care, to produce into act some grand and firm Ordinances, which a free born people will have no cause to repine at.

The *Aphelion* of *Jupiter*, is in the Sign Ascending, he himself posited in the sign of the Eighth, lately separated from the conjunction of *Mars* in the eighth, which gives us occasion to think, that if the destroying Angel had drawn his sword in the former year, he hath near this time sheathed it.

The Square of *Mars* and *Venus* succeeding presently after this Revolution, signifies extraordinary loose libidinous, and licentious living, which as *Mars* is now posited in the House of death, and a fixed sign, will bring many to their graves. Next let us approach to see what the most prevalent diseases of this Quarter may be. It is the opinion of Authors, that the *Sun* by his presence doth beautify those Houses and signs wherein he is posited, and doth remove or obstruct many of the other signified impending obnoxious influences: he is now posited in the sixth, the Moon being Lady of the tenth, and with the Dragons Head applying by a Sextile Dexter to the *Sun*, doth give much hopes that many Diseases will not be either so visible as formerly, or else wholly excluded; but *Venus* being Lady of the Ascendant and sign of the fifth, and within the Orbes of the Square of *Mars*, doth shew that it will be an extremely dangerous Quarter, if not all the whole Year, to cause Surfers and depletion of *Humours*, especially of blood. The exaltation of *Mars* in *Taurus*, in the Eighth, will produce

duce Quinies in abundance, to men and women of a middle age.

A Benevolent Lord of the sixth, and in the Sign of the eighth, warns us for to have an especial care of those Diseases which insinuate themselves but mildly and serenely at th. ir first approach.

Now a word or two to the *Commoners* in particular.

The *Moon* being their general significator, with the *Dragons Head*, and in *Capricorn* weak, receiving detriment, in the sign of the second, and applying to the Sextile of the *Sun*, gives them to understand, that what Emendation they this year receive for their *benefit*, will rather lie upon the mercy of their Landlords (which is very probable will have some remorse on them in many places) than by their incomes which they are like to receive by their industry bestowed upon their fertile fields.

The particular Significator of the commoner, *viz. Venus*, is in the House of *Saturn*, but sign of the fifth, shews them to be much inclined to mirth and jollity, though there be but a small appearance of any cause for it.

As *Jupiter* which is general Significator of the Clergy and Ministerial Function, of the Law, and its execution, is in the Eighth, separated lately from the Conjunction of *Mars*, exalted in the fourth, Lord of the seventh, and second, gives a fair signification; that the general Heads of the forementioned things are pretty well and pleasingly rectified by the power of the Sword, united with sound Counsel, which is one cause of an addition of joy to the honest Commoner, and of lamentation and mourning to such of the

Clergy,

Clergy as received Tythes, but never deserved them; but *Mercury* is particular Significator of the Clergy, in this Revolution, and the *Dragons Head* of *Venus* posited in sign of the ninth, *Mercury* himself being in *Aries*, our National Ascendant and Sign of the professional return of this present Year, which gives us to understand, or at least to hope for so much; that certain particular men something better qualified then such who altogether prate for Tythes, are established, or will be in this present Year: nevertheless it will not remain so, for *Mercury* is going to combustion: In this Year will many of our former Laws, Acts and Ordinances be *disannulled*, and those which are more wholesome and more agreeable to English constitutions enacted.

*Mars* in *Taurus* exalted in the fourth, lately separated from a *Trine* of *Saturn* doth shew that Ireland doth stand in something a better posture then it hath done: as likewise that we have had many *Embassies* betwixt us and *France*; but nothing concluded, or as good not at all, as not the better.

The *Scheme* shows us inclinable to fair terms and propositions of laudable dealing with them, but they must be beat into better manners before they will amend, for they are this Year some kin to the treacherous Scot, that would never amend by fair means, till now he repents of his folly.

The professional Sign of the fifth place from the great Conjunction is transmigrated to the Cusp of the sixth in this Revolution, it beholds the Sign with a *Trine Aspect*, intimating that the Year will be full of *Embassies*, many of them concluded to a Universal  
bene-

*benefits of the English Commonwealth.*

Now because there happen two Eclipses of the *Luminaries* in one Month; but a little preceding this *Egrefs*, I think it not amiss here to enter their *Screams*, and to treat of them as they are related and have *connexion* with other Configurations.

There will this year be five Eclipses conspicuous to the Inhabitants of this earthly moving Star, but of those five, but only two visible with us in England, the first whereof is of the Moon.

January the first at eight hours, twenty one minutes forty two seconds, at night being the middle or greatest obscuration, the beginning whereof is at 6 of the Clock forty nine minutes, and forty six seconds

the end at nine a Clock, fifty three minutes, thirty eight seconds.

The total duration from the beginning to the end, is three hours, three minutes and fifty two seconds. The Heavens then beholding this our earthly Star, as this Scheme demonstrates. And here I care not greatly (having an Eclipse in discourse) to give some Astrolo-

Astrological Philosophical Reasons of the apparitions of Eclipses.

There is no *question* to be made but all Conjunctions which are performed under the Horizon, are of less efficacy in the opposite parts, then those which are visible; but because there hath hitherto not much notice been taken of any Conjunction in respect of the difference with *Latitude*, and without: I shall demonstrate by what *influence* they emit their *virtues*, or rather perform their *virtues*.

And first of the *Essence* of an Eclipse. An Eclipse is not contrary, but according to *Nature*, but differs in custome only, and is a *privation* of the usual light, and so consequently of all the attendancies of light; wherefore the *accidents* and *manner*, *viz.* quantity quality, and position, of Eclipses being considered the ancients with great reason have not only found out the qualities of the *Events*, but also of the *diminution* of *time*, when their effects shall be reduced into *Art*, or rather when the *Lumary* Eclipsed by the deficiency of his light and *virtue*, shall be deprived of sufficiency of *influence*, according to his *Nature*, and the actions which his *virtue* is to perform. In a word, the effects of the Eclipses lie in *privation* of the Principled *Luminaries* *Influence*. I cannot be denied but all configurations of the *Celestials* first alter the *Elements*, pecially the *Air*, which alters all *humane* bodies.

Now when an Eclipse happens in the *Oriental Quadrant*, the *privation* of his influence is sooner manifest, for the night or the day, (speaking now indifferently of both the *Luminaries* the night being ruled by the *Moon* Influence to as great a measure as the day

day by the Suns Influence: But first of the *Sun*, which having been absent all night, and then happens to be Eclipsed in the *Orient*, before he hath had opportunity to ratifie the Ayr according to his wonted custome, is deprived of his Office; wherefore such enormities which come by defect of his light, manifest themselves so much the sooner, even as the accidents before mentioned of the defect are the greater: So that an Eclipse operateth soonest in the *Orient*, later in the Meridian, where he hath had opportunity with his rising Beams to clarify the Ayr; but latest of all in the *Occident*, where not only his rising, but his Kingly Meridian Beams, hath better corrected our daily nourishment, v. z. the Ayr: therefore not without reason have the *Ancients* according to experience, allotted the precise time of the operations of Eclipses, in respect of the deficient part of the *Hemisphere*. Yet it is not unknown to me, but divers Authors have both their different measures of time, and manner of operation.

Likewise I know that the Conjunction of the *Luminaries*, have effects attending their united Beams, according to a *Geometrical* consideration, as well as the other Planets; but where there is a privation of light caused by one Planet and Stars obscuration of another, there must needs appear a more principal defect of the Influence and virtue which the Eclipsed Star or Planet should in his posture of the Heavens have emitted to us. I shall insist no longer upon this, but conclude, that in all Eclipses of any Star whatsoever or Planet, the Influence still is a privation of the benefit in Nature, that the Influence of the planet or Star Eclipsed contains: and now we shall proceed to this Eclipse, and observe what the effects thereof may be.

The Digits Eclipsed, are 10 degrees 51 minutes, or thereabouts, therefore a great Eclipse, the part of Heaven deficient, is the 11th. House, and rising into the 10th. the sign is *Cancer*, and the Planet the *Moon*, from which may be inferred much detriment to the Commoner, which is further augmented by the position of *Saturn*, so near the Cusp of the second; many *Tergiversations*, *Back-slidings*, *Relapses*, and breach of friendship, bewixt one man and another, which will occasion many *debates* and wrangling law-suits; the Rrongest Planet in the Scheme is *Mars* in *Aries*, posited in the eighth, the Luminary Eclipsed, being with the Dragon-Tail, together with the Square of *Sol* and *Jupiter*, the effects will fall most heavily upon such who in their *Nativities* have any of the five Hilegyacals in twenty one degrees of *Cancer*, *Capricorn*, *Virgo* and *Pisces*, or within five degrees before, or after: So that I wish every one that knows his *Nativity*, rather to put up a wrong this year then revive either *Quarrel* or Law-suit; if any of the premises touch him: but doubtless we in England shall be less *sensible* of the disasters signified by this Eclipse, then many other Nations; for we have *Mars* strong in our *Ascendant*, and *Jupiter* with his propitious rayes in the same sign; so that those Cities and Regions under the Eclipsed sign, have more cause to look to it, which are especially, *Holland*, and *Scotland*, *Zealand*, *Russia*, *Numidia*, *Bythinia*, *Colechia*, *Carthage*: Towns, *Constantinople*, *Tunis*, *Venice*, *Pisa*, *Millan*, *Terk*, &c. All which will suffer either more or less of the effects before mentioned: besides in some of the places before mentioned

oned let them be sure to look for tumults and up-  
 roars: The time when, we shall mention in the  
 Monthly predictions: as to us in *England*, let us a-  
 bout the time of the Eclipse, and after, expect vhe-  
 ment dipping, and frosty weather, yet often chang-  
 ing; doubtless before the effects of this Eclipse de-  
 termine, the *Dutch* will in some measure or other,  
 provoke us English to wrath, and that as I suppose,  
 about our *North Seas*: Doubtless we in *England*  
 shall be sensible under the effects of this Eclipse, of  
 very high divisions betwixt the Commoner and the  
 Clergy: neither doth the Commoner seem content  
 with the Law, the very signe and degree Eclipsed, is  
 the Cusp of the *Medium Caeli*; in this *Revolution* the  
 Dragons-Tail coming neer the degrees of both, which  
 doubtless, will incline a sort of people not onely to  
 murmur with their Superiors, but I fear to prove tu-  
 multuous: But seeing that I cannot give information  
 to Authority, to prevent and take notice of the time  
 of such *misdemeanors*, without giving encourage-  
 ment to the promoters thereof: I shall not meddle  
 with such things, for although it may stand with our  
 credit to predict, it will not stand with our honesty.

**B**eginning of the Year **The**

# General Astralogical Preliminars.

The two Eclipses happening in one Month, I shall enter the Scheme of the other, here.

The beginning of the Eclipse is on Monday, the eighth, at eight, six, cords, at London. The middle at 87. The end, eight minutes after 3. The total duration, three hours, set continuous.

The quantity of the body Eclipsed, is eight digits, or fifty minutes, eighteen seconds, and therefore a great Eclipse.

The sign of the Moon, after preceding, is the Horse of this Eclipse, the sign of the seventh is now the tenth; assuredly our *Grandees* and *Supream Authority* will be extremely pestered with multiplicity of rugged Petitions; nay, I fear worse; but if I might prevail with the generality, I would persuade them not to seek that by rough dealings, which will be granted upon more milder terms: nay, I absolutely fear that the *uncouth dealings* and actions of the Commoner, will go neer to retard that *Universal blessing* for some time, that is so much expected.

The

The conjunction of the great Conjunction and almost de-  
 being upon the Cusp of the *Medium Caeli* in  
 an Eclipse, doth intimate that no good can be done at  
 present, without the helping hand of the present Au-  
 thority, which is furth<sup>r</sup> signified by the Moons de-  
 fluxion to a Sextile of *Mars*, and the strong in *Aries*,  
 next Conjunction with *Jupiter*, in the second from  
 the tenth, which will assuredly give us what we hope  
 for, if we can have but patience; the Dragons-Tail  
 in the second, will still cause a consumption of our  
 purses, in regard of our wonderful management of our  
 Sea-affairs. *Saturn* in Trine to *Mercury* in *Capri-  
 corn*, but in *Quadrate* to *Venus*, Lady of the fifth,  
 doth prefigure very hard labours unto women, espe-  
 cially to them of a middle age: the Square of *Jupiter*  
 and *Mercury*, Incident with this Eclipse, will  
 doubtlesly cause a very turbulent time at the Eclipse,  
 and after: The *Luminary* being Eclipsed in the ninth  
 House, falling into the eighth, and in the Sign of *Sa-  
 turn*, will cause the death of many ancient people,  
 more especially of such as are signified by *Aries*, *Tau-  
 rns* and *Scorpio*: and before the effects of this Eclipse  
 be over, we shall see a more settled estate of the Mi-  
 nistry, then we have done for this many years: *Mars*  
 doth still retain his prerogative, and presently con-  
 joyning with *Jupiter*, Lord of the tenth in *Aries*,  
 and exalted in the Ascendant, in the very degree  
 whereof ascends the North side of *Jupiter*: So that  
 in spite of all opponents (and there will be very many)  
 we shall attain to that which we have so long sought  
 for.

This Eclipse advises the *Tartarian* that he meddle

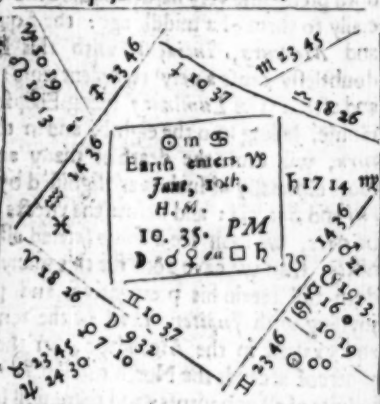

not with the *Turk* while these effects last, which will be a long time, for I see he will be inclinable to it.

The third is a Total Eclipse of the Moon, *June 26.* but not here visible, but in *India, Syria and Arabia, Java Major, and Java Minor, China and the Philippine Islands,* it will be a great Eclipse.

The fourth is an Eclipse of the Sun, *July 11.* and will be visible in the *Mare pacificum,* and the Straits of *Magellan.*

The fifth and last, is an Eclipse of the Moon, *December 21.* and will be seen to our *Antipodes* and *California; the Gulf of Mexico, Barbadoes, Lavinia: The Island of Good-hope, De-las-Tiberenos.*

The Angle of the Season of the Sun's Ingress into *Aries*, being all movable according to the opinion of Authors we are to consider the Seasons of the other

*Equinox and Tropicks.*

The Sun entering *Cancer*, begins the Summer quarter, *June the tenth,* at thirty five minutes past ten at night

night. The face of the Heavens being as this figure represents, and assuredly were it not for the effects of his *Eclipses* predominant, we should have good hopes of being quite cured of those distempers we were sensible of in the Spring.

The Trines of *Saturn* and *Jupiter*, neer unto the Tropical Ingress: *Saturn* casting his *Antiscion* to the Cusp of the second; the Ascendant of the Trine being neer the place of *Saturn*, gives us some hopes of a melioration of our present burthen of *Taxes*; but the Moon applying to a square sinister of *Saturn*, doth intimate that we do not take a right course to have this benefit performed; but the sign of the second being the profection of *Saturn* and *Jupiter*: *Jupiter* being Lord of the tenth and eleventh Houses: *Jupiter* will overcome though never so many *Saturnines* oppose, he being likewise Lord of the tenth, in the Eclipse of the Sun; *Jupiter* in the third, may intimate safe travelling, and sure return from the South-East; but assuredly *Mars* and *Mercury* in conjunction in *Cancer*, predict no such matter from the North and North-west, neither by Sea nor Land, and I much fear that our *Maritime Forces* will in this Quarter be much weakened by the loss of men, sustained both by *Calentures* and *Fluxes*, the Dragons-Tail being so perniciously propinquate to *Mars*, in conjunction with *Mercury*, in a watery sign in the sixth House, and if that in 1655. we had a very perillous disease of the bowels, we shall now certainly be as sensible of obnoxious infirmities in the Stomach, which will be not only a *Flux* thereof and *discentery*, but also preternatural heats at some time, and at other times cooled.

humours, thereby much offending and corrupting the *Vitals*: and I am perswaded, that not more Summer Ages hath been seen in many former years, as will in this one year; wherefore I wish all *Astrological Students* to take this warning and notice (which I give them) for granted, that in most or all the diseases *incident* to this year, but especially the Summer and Autumnal Quarters, not to look so much to the cure of the disease according to common custome, as formerly; for within the Orb of the Eclipsed degree of the Sun, *August the second*, is situated the degree of the seventh of this Quarterly Ingress; as also the Sun from the House of *Saturn*, denying his light to the *Moon* in her own House; *January the first*, Together with the other Eclipse of the Sun in the same Month: which will us to succor the vitals, and to maintain the heart, and keep that on wheels, for whilst we are tampering with the *primary specifical* afflicted part, the heart may fail under its burthen: Wherefore for a remedy of the diseases before mentioned, or those which have near relation to them, all things being considered, which for want of Paper, I cannot here enumerate, I conclude that *Ros Solis*, is the most universal medicine, being prepared according to the chymical art, for the cure of these Diseases, *Aurum-Potabile* excepted.

Now in relation to the weather, take thus much, that *Saturn* in a dry Earthly Sign, as also *Mars* and *Mercury* exhausting the moisture of *Cancer*, as also all the Planets either in dry fiery Signs, or cold earthly Signs in the *Revolution*, doth signify the weather rather inclining to driness then moisture; yet from hence

cannot be predicted any thing, but safety to the fruits of the Earth, by reason of the propitious position of the *Moon* and *Venus* in the fourth House in *Gemini*, both in Trine to the Ascendant of this quarterly Ingress, and to the Ascending sign of the *Revolution*, which is further confirmed by the Sextile of *Saturn* to *Mercury*; *Mercury* being Lord of the fourth, and receiving *Saturn* in his own House: the Physician signified by the *Moon* and *Venus*, or either of them, will be most fortunate in the cures of this Quarter, but *Venus* especially; for the Moon is afflicted by a Quadrates of *Saturn*, which will something obstruct.

The Ascendant of the *Lunation* preceeding the *Comets* visible appearance, is the same with the *Revolution*, and *Antiscion* to the Ascendants of the Eclipse of the Moon, and in time to the Ascendants of both, the Eclipse of the *Sun*, and this quarterly Ingress; which two last mentioned *Scheams*, have both one degree ascending: So that from hence we may see what a wonderful harmony there is, amongst the Coelestial Configurations, and likewise we may alwaies observe how wonderfully inimical some Saturnines will prove to the Establishment of our Legal Rights, by the Quadrates of *Saturn* and the Moon both in the *Suns* Eclipse, and in this Tropical Ingress, But the Decrees of Heaven are immutable.

th's Conjunction, the *Medium Caeli* of the Trine; but behold the sneaking pretences of some Lunar fellows, pretended friends, but conniving enemies, confirmed by the Moons position in *Scorpio*, the sign of *falsity*, aspecting *Saturn*. So that the well-wishers to the publike, have more need to cast an eye of *severity* to their own bosome pretended friends, then to the publike gainsayers.

The separation of *Sol* from *Saturn* in the ninth House, the Ascendant of their Conjunction being opposite to the present *Medium Caeli*, doth shew what extraordinary Ecclesiastical brawlings have been of late by some spewed forth against Authority, and one against the other, and it is not yet concluded, but more is like to be, by reason of the near approaching Conjunction of *Mars* to *Saturn*, but doubtlesly the more moderate of Divines will be very solid, and contented with reason, because of the propinquity of *Mercury* to *Saturn*; but *Mercury* is combust, and he Lord of the ninth, in Conjunction with *Venus* in the same House, but sign of the tenth.

Some *Embassy* is concluded in this quarter, and some gracious Act or Ordinance will be Enacted, and I hope an establishment of such Law, and the attendance thereof, which will be both beneficial and acceptable to us in *England*; but as for the wretched Nation of *France*, it is like to suffer beyond measure, not only by the *Sword* and by *Fire*, but by the *Pestilence*, and other Diseases: whereof let *Lyons* in chief beware, and that especially about the 21, 22, 23, 24, 25 days of *November*, about which time or not long before or after, I do expect such a *Pandemic*, or *Pestilence*,  
*John,*

*set-mes*, a new Star or Comet; however divers and sundry kinds of *Meteors* and *Apparitions* in the Ayr, whereof if Artists will but take notice of their times and manners of Appearance, I dare undertake that the most obscure actions, and most material *Trans-actions* of our Mundane affairs, might be most significantly known and reduced to more particular judgements of their *times* and *manners* for such prodigies. I call them prodigies, not in respect of *Nature*, for they are not against *Nature*, but *Custom*; and I much wonder of the reason why many learned men maintain these prodigies to be above *Nature*, when it is well known that their portents do not incline to no action *supernatural*; as for their appearance in the Heavens it is as demonstratively manifested by the *Stars* to us mortals, as other actions and *contingencies* be: for a consideration whereof, observe that Authors maintain, and experience verifies it to be true, that when the Ponderous Planet *Saturn*, makes his motion out of one sign into another, it betokens clashings and gapings of the Clouds, the distribution whereof is many times into diverse *formes*, which formes I say, if rightly perused by one that hath judgement in *conjectures*, and knowledge in *similitudes*, and well versed in *Natures Hieroglyphicks*, may attain to the knowledge of all their prodigious portents, which that it may be done, is probable, and that from the knowledge of these things.

1. The Quarter of Heaven the Star rules (imagined to be *Saturn*) which signifies the prodigious appearance.

2. Consider whether the appearance be in the

Quar-

Quarter of Heaven he generally rules, or particularly at that time.

3. To consider the particular *formes* and *shapes* which are attributed to that *Planet*.

4. The particular formes and shapes of the *Asterisms*, *Topical* and *Vertical*, to the places of their appearances.

5. The shape of the signe and *Asterisme* arising.

6. In general, the figure of the *Asterismes* of the Situation and place of the last visible Comet, a prodigie: for by the motion of the *Prodigie*, the colour, form and shape, its inclination and action, and the concomitancy or disparity it hath with the aforementioned, is made perspicuous, the present appearance his meaning. I will not say but that God may, and hath sent wonderful *Prodigies* extraordinary, in token of his wrath and displeasure in former times: but I am of opinion, that as he is the God of Nature, and did create *Nature*, he doth not violate the Laws of Nature which he first gave her, and that what ever prodigie hath happened, it is agreeable with plain *Nature*, but that our judgments are obscured and clouded by our extreame weakness from those most sublime inculcated *Theological truths*.

Let us but consider on those things within Terrestrial you account *Monsters* and prodigies more especially, or preternatural births, if I may call them *preternatural*: and I am sure, if not so, it cannot be called *supernatural*, perhaps our weak *Genius* cannot find out the reasons of every particular *preposterous Birth*, if we knew the causes: much less seeing they

they are often or altogether absconded from us; it is not unknown to me that divers learned men endeavour by the *Position* of Heaven to find out the cause whereon I absolutely protest against, and do affirm that it is the Prodigy or *Monster* created in Heaven, over and above the ordinary course of Nature, which is the cause of *preternatural birth*: And this I will may be well observed, which I in a small measure know by experience, that if a Native have any of the principal *Hylegiacals*, in the place of the first appearance of a prodigy, that Native hath had either a *deficiency*, or a *superabundancy*, or *disparity* of parts of the body, or manners, or affairs contrary to custom. I likewise affirm that some unusual appearances may as well advance one in parts or affairs, as make another abject and vitiated.

I have the rather spoken thus much, because I do expect that divers *Apparitions* will be in this Autumnal quarter: confirmed by more testimonies than is usual, for it is observed what time soever *Saturn* transfixes from one sign to another, such unusual appearances have been, but this is more memorable, Spring by reason of the Notable *Trine* of *Jupiter* with him from an Aery sign, *Saturn* himself being in the sign whereon the Sun begins the Autumnal quarter, and that at such time of the year, where by the Air is most fitted for impression, by reason of the cold *Ayrs* congelation of the warm ascending vapour; the *Moons* turn and *Mars* likewise at the time of this Aspect being in the Autumnal sign and exaltation of *Saturn*; I thought good the rather to enumerate these things, that all young & Artists (whereof dispersed abroad in

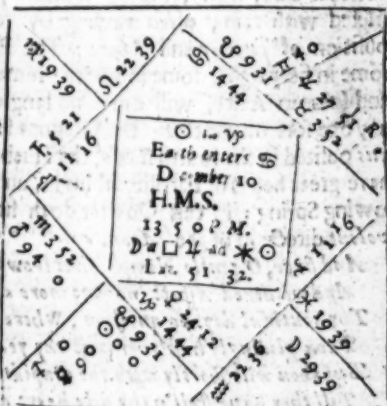

England) we have great plenty, to make them the more desirous, in making *observation*, and if themselves be not able to judge, to communicate their time of appearance, their manners, forme and shapes, to abler Artists; in so much they will not only thereby know their general signification, but if they have their own *Nativities*, or their friends, their particular signification in relation to themselves, whereby they may not only avoid many evils; but may be *Auxiliar* to many beneficial actions.

I now leave the Autumn Quarter, and approach to the Winter.

*Where Crones bearded glistenings fly.*

*Darkens the Sun, obscures the skye.*

This Ascendant of this Hyemal Ingress is the same of that last of the Spring, and him in Time to sign the Ascending sign of the Sun. Eclipse, Saturn turn with in the Eclipse of the

Sun was in the seventh, is now upon the Cusp Ascending, Mars who was then in Cancer, is now in

50 *General Astrological Preditions.*

*Scorpio* in Tria to his then place, which together with other configurations, we do predict, that Authority will next this time make some Act or Ordinance which will give much discontent unto divers people by which Act they will accumulate to themselves much slander and detraction; the Moon separated from a Square of *Jupiter*, posited in the eighth, exalted in the tenth: surely the Commoner hath an extraordinary will ke, at some Act; but have a little patience the Moon going to the Sextile of the Sun, the in the house of *Jupiter*, aspecting him in the place from the great Conjunction; all the mischief that *Saturn* can do, will I hope, receive a timely remedy. The Square of *Sun* and *Saturn* in ♈ and ♎, will bring extreme cold, frosty, snowy weather, many times mixed with rain, often varying by reason of the position of *Jupiter* and *Mars*: The Planets being some in fiery signs, some in watry, some in Earthly and some in Aairy, will cause no long durability of any one sort of weather; the Dragons Head and Tail posited in the fourth house, the Husband men will have great hopes of Fertility of his ground in the following Spring: in this Quarter doth happen a benevolent direction of the Moon.

*And since, O gentle Nymph, that frowning brow  
And withered Aspect now no more appears  
Thy youthful days to question, Where or how  
Thou glidingly hast ever-past thy years;  
But thou wilt shortly with the Cupids play,  
Till they have stell'n thy silly heart away.  
The vainest vanity that ere was seen,  
The void'st inanity of Heavens Queen.*

If we may believe the judgment of *Cabalists*, we can expect no less in this present year, then some more then ordinary change; not only in *England*, but in most parts, if not all of the *Habitable World*; there is a mystery in 56. and although it be no *Sabbatical* return, yet it is a *Trigonal return*, wherein lies a great scrutiny, and a wonderful mystery; If that learned *Jew* that expected their *Messias* coming in 1654. had but seriously considered this he would have had far more firm grounds for the coming of their *Messias* in this year: though for my part I expect no such thing; I rather think, and I speak it with moderation, that the *Jews* in some parts of the world, are more like to be called to the faith of *Jesus Christ*, a thing so long expected: I cannot predict no small thing, and what greater to predict then such a mystery, and long desired for happiness? for we cannot expect to be happy to the full, not till their uniting. I speak something confidently from the more secret *Cabalistical and Theological Doctrines*; that in some parts of the world, and why not in *England* likewise? will be many of them converted this year. Do not expect that this shall come to pass so soon as the words are out of my mouth, nor with such a hurly burly, as if the world was grinding to powder, nor yet expect to see them marching to *Jerusalem* in droves, as men drive Sheep; no, it will be many years, and very sober debating among themselves will be; neither shall all condescend at once: and because I know some that are *Cabalistically* given, I will give them this title figure, and leave it to their *transposition*, not questioning but there will some find out mystery enough

enough to comment upon. What I have said, I leave to time to determinize, and rest confidently satisfied at present, that there is one more universal *Catastrophe* to appear on the Stage of the world shortly, but in what manner and quality, I think is obscured from the judgments of mortal men.

	1650	1000	
	56		

The first of these is the year 1656, which is the year of the great deluge, and the year of the great fire. The second is the year 1600, which is the year of the great earthquake, and the year of the great pestilence. The third is the year 1650, which is the year of the great famine, and the year of the great war. The fourth is the year 1000, which is the year of the great darkness, and the year of the great confusion. The fifth is the year 56, which is the year of the great judgment, and the year of the great redemption.

# January hath XXXI Days.

Tis hard to please old *Crows* withered looks,  
 Nor *Mars*, nor *Mercury*, nor *Sat*rd, nor *Book*  
 Will do't; his childish dotage will despise,  
 And take your smiles for flattering fisticus lies:  
 If neither foul nor fair will gain the way,  
 Let him passion, the doting *fool* will say.

Observations on JANUARY.

*Fair weather send us all, and we'll to Shipping,  
One gentle gale of Wind, and We are tripping.*

IN the first place to find one, secondly, to make him an Enemy, that thirdly, we may have one to fight withal; Let us observe near the beginning of this moneth, what Ecclesiastical Stickler it is that thus disputes both *pro* and *con*; certainly no mean action is in hand, we are all amazed with expectation, we are not at all pleased neither with our selves, nor yet with others; and in truth we would have something, if we could but tell what; The Commonalty is extremely ill at ease, in a most wretched restless condition in their own apprehensions, the greatest part whereof think that nothing will be well, neither are our Superiours free from disturbed fancies, most intricate Labyrinths, troublesome Agitations, not knowing scarce which way to go about to appease a giddy multitude; and were it not now for the ingenious and laborious Souldier, we might justly fear more mischief then will be cured with a ten years war, but the end crowns all things; and although our Happiness have never so many Opposers, we shall make a Breach and Entrance about the latter end of the moneth, after much high Language, after the opprobrious Language of our Enemies, of the wretched backsliding of our friends; to a fair high way, which will bring us at length to our *Fabrick* end; for our English *Guardian* is firmly fortified against all assaults; not so with the French, they must sing *Lachrymæ*, instead of a Psalm.

Observations on FEBRUARY.

**V**VE are not yet well settled concerning the actions of the last month, ♀ transits the place of the Eclipse of ☉; a *sextile* of ☉ and ♃, the Lord of the Eclipse, as likewise a *sextile* of ♃ and ♀, and *sextile* of ♂ and ♀; ♀ being principal Ruler of the Eclipse of the ☉: These do promise us a more mild behaviour, and a better understanding amongst our *Superiors*; nevertheless when all seems to be calm and quiet, a new tempest arises concerning the Clergy and a vote must pass in the affirmative; the Law much controverted, and some unnecessary act *abbreviated* or *disannulled*. Friends cannot agree one among another, its the sad fate of the times that we should make our selves or friends a laughing stock to the publike enemy of our welfare: We are very busie in searching out the *Achan* that obstructs our happiness, and have great hopes of the discovery of some *malicious* private Conspirators, which are wolves, but go in sheeps clothing, but now have at them, their private underhand dealings will no longer take effect, therefore they maintain it in downright terms, they are detected, and every one shall in his *degree* wherein he hath obstructed our proceedings, suffer: the opposition of the ☉ and ♄ the ascendant whereof is ♄ the exaltation of ♃, and place of the ☉ Eclipse, the ☉ in X in the 10th opposing ♄ lord of the 7th in the 4th will probably bring some to execution, for which we of the Commonalty begin to smile, and are better pleased; the ascendant of this opposition is likewise the ascendant of the Eclipse of ☉; matters are stoutly agitated and put forward,

# March hath XXXI Days.

The *Jove* born *Martialist* on *Saturn* smiles,  
 Whilst *Venus* tempteth with her crafty wyles,  
 Not only with her Eyes, but *Eloquence*;  
 Her *Oratory* art can play at Fence,  
 As doth the *Sword without*; this deeply wounds  
*within*, the other causes cordiack swoonds.

Observations on MARCH.

A health and happiness attend those noble minded *Herors*, which with so much *Nocturnal vigilancy* and daylie care attended the action of the last month, in bringing our oppressors to an account of their Stewardships; long may that *Martialist* live which hath granted life to some that little deserved it, but let him break a hole in the wall, and he shall see more iniquity, yea to the full. There is yet one more ecclesiastical Mercurialist that obstructs, interrupts, & singly dissembles, and what not? It hath been his trade a long time, but if I be not deceived, he is in his great *digression*; he must not think alwaies to play *ins & outs* & *bo-peep*, who it is, time will manifest, though I may not, the first thing that will discover him will be his busie agitation in going about to clear himself from a slander with a matter of truth. I hope some will take notice of what I write, & when they see this part on the stage, let such of those as have therewith to do, call to mind what I have said. I cannot enumerate how much vilany and mischief hath by him and his compliances been acted: On a sudden here is strange news, and mens minds are wholly diverted, and as formerly, so we are now still in expectation of what the events of a few days will be. Sudden news of a *Seaght*, but it concerns little our Forces, which are sufficiently Rampant; Let the French look to that, and be with whom neer this time they have the sad fate to meet withal: Wretched France hath as many divisions in minde and opinions, as fashions in their garbments.

# April hath XXX Days.

Those glancing *Aspects* of those wanton eyes  
 Are now *transform'd* to warty brinish cries,  
 By time that doth *transform* both high and low;  
 'Tis other matters now we have to shew;  
 AL's at a Non-plus; Non-conformity  
 Twixt high and low; such *Sapience* cannot spy.

Cold Rain.

Last quarter half an hour past 2  
 afternoon. *Easter day* the 6.

*Term begins.*

New moon 32 min. past 2 in afternoon.

Wind and Rain, South and Sou. we  
 thunder.

First at 4 in the afternoon.

A springing time, and more serene.

Full moon at one in afternoon.

Observations on APRIL.

Perhaps we of the English, if not in league with France, may give them a watry dry-blow, it is not improbable, be it how it will, but that we shall have words, if not blows with France: as to us English, both Magistracy & the Commonalty, are better pleased then formerly, the one in the hope of gaining the others good will, the other in as strong hopes of being amended in some measure of the heave burthen of Taxes, and great hopes there is that neer this time a timely consideration will be had by Authority of the *restitution* of the Ecclesiastical and ministerial function, which will be much pleasing to the commoner. London beware of Turbults, make no uproars, for thou wilt smart for it. The ascendant of the square of Saturn and Mars, and that neer to the degree also of thy City Signe opposite, Mars being in Gemini, gives thee a fair warning, and I am almost confident that in this moneth thou wilt in a high measure sustain loss by fire, especially in the East and South-east, and let thy Merchants beware, and think of my words, for whoever of them that trades neer France, will be in danger of suffering extrem loss, not only by Shipwack, but Pyracies also, or that which is worse, however we have some good news, or good comes by our Merchants from the Indies, or may probably hear of the activity of our Forces in those parts: Good news out of Ireland, and the Tories are said to shift their Lodgings, and by this time its very probable that France doth come to a better compliance with us. The \* of ♂ & ♀ with reception the one from the *profectional* ascendant of the great conjunction, the other from the City Sign, may prove beneficial to the Londoner, & amend that which formerly was amils.

# May hath XXXI Days.

If any time the two Superiors smile  
 One on the other, let us hark a while;  
 Sure they no mischief mean to sinful man,  
 Sure they Diff'mble not, as Mortals can;  
 Sure they regard the Eternals firm Decree,  
 Surely Exemplar they were made to be.

*Observations on M A Y.*

**I**Ts no smal thing that is the now present discourse of the people, nor no trivial action which authority hath in hand, but certainly there is much debate about many gracious acts tending to the publike good, but before it be brought to pass, it will be a hard labour. Here is likewise introduced a conformity of judgement betwixt some principal men of our Nation, who have conceited a misapprehension the one of the other, and some man or men formerly in authority (but by the chance oftimes dejected) are now restor'd to their pristine glory, and their former places of *Offices* and *commands*, or something equivalent thereto. The Trines of Saturn and Jupiter, Saturn and Mercury, Saturn and Venus, doth shew that all means possible is used for a right understanding of some former mis-conceptions, but the square of Saturn and Mercury, square of Saturn and the Sun, shews a discontented Commonalty of the City of London, and that they have not yet what they have so long looked for. It is very probable that about the latter end of the moneth we may have news from *Scotland* of some petty Treason or mischief intended against us. Its probable that about this time will that Battel be fought in *France* which will for this year turn the ballance: The Royalty suffers, the fate of Kings being now worse then that of mean men. Some small contrivance of a thing called a Plot is hatching in *London*, but if the fortunes destroy such actions as have their Original against Nature, Laws, and Customs, this is like to come to nothing.

# June hath XXX Days.

Well-fare that *Ordinance* would make us free,  
 Ill fare those *Cynicks* that *Obst*ners be;  
 Well-fare the *Souldier* knows the use on's sword,  
 Ill-fare that *Gown-man* mischief with a word.  
 Mischief befall *them all* that *condescend* not  
 To speak a word for that to ev'l *tends* not.

*Observations on JUNE.*

**T**He more he begins with news out of the North, and some more then ordinary action is there in hand; but as to us, our only work in *England* is in making discovery of our obstructers, which cause the work in hand to go on so slowly; the souldier which formerly been serviceable in behalf of the Kingdom, and hath as yet received little thanks for his pains, may probably attain his *arrears* or *debenters*; I am confident there is care taking for such a thing. The *Scots* are still *Scots*, and without doubt we shall see of some massacre in *Scotland*; I advise all such men which have respect to the *Celestial Ordinances*, to warn of our English souldiers, that they would have care of themselves, for the *Scots* will at one time or other (when opportunity serves them) mischief us English, so long as it is *Scotland*; much thieving northward, many Pyracies and outrages committed on the *North Seas*, & hereof our *London Merchants* must bear a share, but not all: A principal man called in question, and brought into great *Detrimment* by the injury of his enemies; but this is not all, there will be some verbal scuffling amongst our Superiours at land, and no less at sea, but all seems well reconciled at a time; by the means of fawning and flattery, *Mercy* being chief Lord of the Lunar Eclipse, and opposer of *Nature*, and by house to *Jupiter*, who is Ruler of the Eclipse of the *Sun*, the *Sun* being Eclipsed in the signe of the 9th, and in the *Moons* Eclipse, both *Jupiter* and *Mars* posited in the signe of the 9th, will not only cause these divisions mentioned, but likewise other divisions amongst the Clergie themselves as also amongst our Lawyers, which are now in expectation which way the ballance will turn.

# July hath XXXI Days.

Disputes with scolding and *supersitig* drawing  
 With *pro* and *con* some constantly be yawling.  
 We may by smiting flint to flint, get fire,  
 So will these broyls engender desperate ire;  
 Discourses gentle, milde, sweetly inclin'd,  
 To profit tend: to *mis* h'eat h'other bind.

Last at 5 afternoon,  
 Sultry hot weather.

New moon 52 min. past 6 at night.

An inclination to warm showers.

First quarter at 10 'n morn.

James Apostle.

Full moon 53 past 4 in morn.

Thunder in abundance, and very  
 hurtful, unwholsome blasts of wind.

Observations on JULY.

The moneth begins with many headlong and giddy *Disputes* amongst the Clergie themselves, one of which sort think it long till they have a finger in the States affairs, and would fain be *documenting* of the same, before themselves have learned any good manner, and now they preach, or rather prate to some purpose, for fear the so called *Jure Divino* fall to the ground, but let them have a care, or some of them may chance to take up their lodging in a prison, they could fain know all things which the Privie Council say, but its now denyed them; their *Intelligencer* Sir man Agent is now dead, if they had reason to know, or wit to understand, they might conceit that the present *Government* hath in their wisdom greater use of the learned *Divine* so called, and their Establishment, then any Sir John carries under his coat, there are proposals fair enough offered them, which they may chance by their petulant contumacies to obstruct their future hopes of. I cannot judge that the Pestilence did the last year, nor will this year much afflict the City of *London*, unless it begin in this moneth. or neer it, at what time Mars and Mercury make their conjunction in Leo, neer the deg. of the Sun's Eclipse in Aug. 1654, Mercury becoming comest at that instant, but Jupiter entering the City sign the other fortune viz. Venus casting a sextile to him, may deter and hinder. Rome suffers by fire, and the Pope, if there be one, suffers death by poyson, or otherwise, and if *Bellarmino* were now alive, he would confess their worship false. Vproars in Italy will give a comma, but not a period to the Regency.

# August hath XXXI D.ys

Gracibus seldom doth with Phœbus meet,  
 But when they do, each other they do greet  
 Most lovingly, of Natures they are one,  
 Can any then withstand their Force alone?  
 Now thundring scabbs read the Azure skies;  
 Joves Thunderbolts on Cætes back now lies.

Last quarter at 7 in morn.

Rainy weather.

New moon 19 min. past 2 in morn.

First at 7 at night, Thunder, Light-  
 ning, and Coruſcations.

Fall moon 39 min. past 8 at night.

Extraordinary high winds,  
 Decollation of John Baptist.

Observations on AUGUST.

IN general it is a pleasing time, and in the general the Nation will be satisfied with some gracious acts of the last and good hopes of the establishment of other wholesome laws for the future. The *London* thrives far better then in former years hath done; here is a very happy time, which you may expect; yet in this very month I fear high divisions, great controversies, nay more, some pernicious designs on foot; some tumult or uproar, and hat in this very City of *London*; the square of *Jupiter* and *Mars*, conjunction of the *Sun* and *Mars*, square of *Sun* and *Jupiter*, part of the meaning of these configurations hath relation to the aforementioned, but it doth not at all concern *London*, nor *England*; but let the *K of Spain* expect loss by Sea, and eke by Land, in such places as formerly he by cruelty and oppression extorted from the poor natural *Indians*. *Mars* lord of the sixth sign of protection, intimates very secret actions within *England*; the square of *Jupiter* and *Venus*, together with the aforementioned, intimates some of the Souldiery discontented, and that in a very high measure, with something either done or acted, or to be done or acted in relation to the Ecclesiastical party; assuredly the Souldiery is upon high terms. I expect their wages to be curtailed. *France* is still in a pitiful condition, and assuredly I think ordained to be ruined. The square of *Jupiter* and *Mercury* intimates not only high winds, but extraordinary high language, and yet is called in question, and now or near this time settled or rectified, or else never; the Commonalty of *London* disagree.

Observations on SEPTEMBER.

**R**egulating of the Ministerial Function is the only thing disconcerted of, *Jupiter* in *Gemini* the sign of the 9<sup>th</sup> of the revolution, and third of this yearly protection, being friendly aspected from the *Sun*, *Venus*, and *Mercury*, from the sign opposite to the yearly protection, raises the Clergie wonderfully expectant to hear what will be done, for it is not yet concluded, something is declared, which puts them to rest for, but all this declaration will not hold firm, no less than 6 of the 7 Planets all in  $\pi$  transiting one the other, which is the ascending sign of  $\delta$  Eclipse. Surely *France* is the Theater on which the worlds whole Theam is acted, the  $\phi$  of  $h$  and  $q$  makes them agree like light and darkness,  $\phi$  of  $\phi$  and  $q$  makes them pursue and pilier, not only one from another, but let us look to our selves in our Sea affairs, lest they thieve from us; they have some understanding men amongst them, which will have enough to do to appease a giddy multitude; nay let some of the principal commanders expect to suffer death by the hands of the soldiers; we in England are secure for a time, but not asleep; we are now about a Disigne that will cause the whole world o wonder, a Navie is providing, and a short time will emit notable actions into the world. The  $\phi$  of  $h$  and  $\phi$  foretels ten thousand mischiefs to the Frenchman; the Ascendant of the conjunction is the degree where the Comet in 1652. past by the head of *Medusa*, which is near the  $\Delta$  of the  $\phi$ , so that out of the worst mischiefs, let us in England expect a blessing by the destruction of our greatest enemies.

October hath XXXI days.

Agree, agree, put up your Swords, so 't draw,  
 We have a Proverb costly is the Law;  
 Yet I'll assure you 'tis curtaild pretty well,  
 Or will be so: For Me thinks a Rat I smell  
 Not roasted yet, but spitted one degree,  
 Too high I doubt 't is for a swayer Fee.

Last quarter at 4 in the morning.

New Moon at 21 past 7 at night.  
 Great Winds moving Rain.

First quarter at 2 in the morning.  
 Now noble Rains borrow thy blood  
 doth cry,  
 A loud for vengeance to the Hea-  
 ven so high,  
 On them that causelessly caused  
 thee to die.  
 Wind and Rain.  
 Full Moon 20 m. past 5 in the morning.  
 Term begins.

Simeon and Jude,  
 The latter end of the month more severe  
 Last quarter half an hour past 12.

Observations on OCTOBER.

**M**Any violent disputes begin the month about Religion, and for eu h I know the man controyersie in falling Church Government is now or som burgne r this time to be disputed. The Trine of  $\Delta$  and  $\delta$ , the one from the Ascendant of the Revolution, & e other from the signe of the 9th and of the 10th of the *Lunar defect* may hint at such a thing: but has not all the signification; however, let the disputes of times be what they will, there is nothing to any purpose concluded. In this month transites from  $\text{♊}$  to  $\text{♋}$ , the opposite signe to the *profetional return* of the great conjunction, which will cause the high displeasure of some in Authority to the *Ministerial* faction, the signe it self being opposite to the 9th of the Lunar defect, and to the 10th of this Equinoctial Ingress: certainly all are displeased, all the transactions of the time seem to be broken off, but a little time ere vers all again; a true information, and a right understanding amongst such as have had the hard fate not rightly to understand one the other,  $\delta$  in  $\text{♋}$  at such time as  $\text{h}$  enters the same signe, causeth plenty of *Nocturnal apparitions*, which will be very terrible from the West and North. According to the time of *S turns* transite in  $\text{♋}$  this signe is intimated, that the Farmer may now expect better times, and more money for his grain, but let him not expect so much in *quantity* as formerly. The fat *Kiebs* almost gone and the lean ones are coming apace; this signe is opposite to the signe of the Eclipse of the Sun in March 1652.

Observations on NOVEMBER.

*Jupiter*, that noble planet, doth salute *Salomon* with a salubrious Trine, for a welcome into his *Exaltation*. Once more Authority apply their studies to conceive an establishment for the future, and assuredly they do mean to be very high in actions to settle the minds of a discontented people; very notable Detractions are now passing forth, and strongly carried on, and a very sweet disposition and pleasing to all but a certain sort of malicious, slanderous backbiters, and in some, meely self-ended Elves in being the fate of the times, such malicious detractors and obstructers of our happiness should have power and authority to hinder us from our due Rights: but it was never yet known but such actions, such laws and edicts which are to pass, to make us like a free-born people, have a hard fate to find multiplicity of obstructers, but we shall overcome, truth and reason will gain the victory, and we shall at last (I mean our principal men of Authority) convince the worst of gain-sayers of their errors, or else utterly extirpate and weed out such brambles as creep and play under-hand. At such time as *Mars* transites the Apheion of *Jupiter*, which is about the 24th day it is not improbable but that a *Paraselenes* or mock Moons may be visible in some part of England either about the full moon, two or three days before or after; if it be deferred to this time, let us expect it in *September* or *October* 1657. However I wish all Artists, or others, for their satisfaction would take notice of it. Its no heresy or schisme if I fail.

We thus (quoth Mars) to Venus, now I see  
Thou dost account the breach to have from mee.  
But da' it thou do'st, sure then thy golden locks  
Are sure to pay for't with the French mans Pox.  
Hark, scolding 'mongst the holy brethren! then  
Pray what b comes of all we infall men.

Observations on DECEMBER.

**M**EN still are in expectation restless, and not well satisfied, and indeed there be some that may have cause to be sad u<sup>n</sup> on the Votes which are now passed, or some Act or Ordinance, which as to their apprehensions doth not taste of all honey, but let them have a little patience, it will be proved more beneficial then many expect, and neer this time is some beneficial Act concluded, that will prove to the happiness of us all; and further proceedings are in agitation, which hardly will be so pleasing; neither will Authority find such an easie process therein to the accomplishment of their desires, but much obstruction, by reason of some Saturnines, and of some fiery spirited Martialist, the souldiery are discontented and repine (I mean a great part of them) at the clergie, but there is a bargain copely ded, and a bargain is a bargain, it must stand. The Lawyer begins to smell something in agitation that doth not half please him, but its a folly to strive, he cannot amend it, for we have a sort of not only judicious men in Authority, but with a sound adjoynd conscientious meaning, which are the undertakers of our present affairs, and are not altogether so self-ended as formerly some were, which gives us more hopes of a good ground-work and foundation, But these very men (though undeservingly) do find the harsh censures of some that snarl, but cannot bite.

*Proceed, thou Jove-born blade, and draw thy sword  
At him that speaks, nay, be that thinks one word  
Against thee.*

*The Vertues, Use, and Power of Opuntia, or the true and Philosophical Aurum Potabile; Attain-  
ed by the studies of Dr Freeman, and Dr Culpeper,  
left with his Widdow, and administered by a Physiti-  
an in her house neer London, on the East-side of  
Spittle-fields, next door to the red Lyon.*

**I**T cures all Agues, it cureth the Fever, though ne-  
ver so violent, it cureth the Gout perfectly. It caus-  
eth women subject to abortion, to go their time; but  
given when the time comes, it causeth an easie and  
speedy delivery. It is an infallible cure for the French  
Pox. It cures the green sickness, and all sorts of Jaun-  
dies. It provokes the Terms. It is good for aches,  
and all affluxions in any part of the Body, com-  
ing of cold. It takes away melancholy and Philome,  
and helps the Rickets. It comforteth the stomack, and  
cures old Rheums, want of Digestion, or Appetite. It  
procures sleep, taken last to bed-ward. Its very be-  
neficial for people of all sorts, to strengthen Nature.  
But what need I nominate diseases in particular? It  
is an universal Remedy for all diseases being admini-  
stered as the Physician shall give directions.

*From my House in Spittle-fields, next  
door to the Red Lyon*

A choice Garden of all sorts of the rarest Flowers; with  
their natures, place of birth, time of Flowering, names, and  
vertues to each plant, useful in Physick, or admired for Beau-  
ty. To which is annexed a Kitchen Garden, furnished with all  
manner of Herbs, Roots, or Fruits, with the art of planting an  
Orchard of all Fruit-bearing Trees, with the right ordering,  
planting, and preserving of them, with their vertues, unmen-  
tioned in former Herbals. Collected by John Parkinson.

*Sold by R. Thrale, at the White Keys at Pauls gate, crossing  
into Cheap side.*

There is a new publication, a most excellent Piece  
entituled *The Lusiad* or *Portugall Historical Poem*,  
Translated into English by *Richard Fanshawe*, Esq.  
Printed for *Humphry Moseley*, at the Princes Arms  
in *St. Pauls Church-yard*.

*Culpepers* last Legacy, (being the choicest  
secrets that my husband left me) in Physick and Chy-  
rurgie (not published in any of his other works)  
viz. in compounding of Medicines, making of waters,  
Purges, and Salts. &c.

*Paracelsus* Secrets of *Alchemy*, and his *Occult*  
*Philosophy*. Sold by *Nath. Brooks* at the *Angel* in  
*Cornhill*.

Globes of all sizes, Quadrants, Nocturnals, made by  
*Joseph Moxon*, and sold at his shop in *Cornhill*, at the  
signe of *Atlas* on mount *Parnassus*, where you may  
likewise have Books shewing the Use of the Globes,  
Quadrants, Nocturnals, &c. *Vignola*, of the *Com-  
pleat Architect*, &c.

There is now in the Press, *Harris's* Tables (with  
an Introduction to the use thereof) exactly fitted to  
the *Meridian* of *London*; and all the fixed Stars,  
their places rectified, unto this present year, and for  
fifty years yet to come. An excellent work, and ve-  
ry useful for all *Astrologers*. To be sold by the Com-  
pany of Stationers.

FINIS.

A. 250.
